Messrs. ADAM and CHARLES BLACK, of Edinburgh ;  
Messrs. ALEXANDER THOM and Co., or Messrs. HODGES, FIGGIS, and Co., of Dublin.

1883.

[C.—3619.] Price 1½d.

TO HIS EXCELLENCY  
JOHN POYNTZ, EARL SPENCER, K.G.,

&c., &c., &c.,

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

MAY IT PLEASE YOUR EXCELLENCY,

In compliance with the provisions of the Acts 7 & 8 Vic., cap. 81, 26 Vic., cap. 11, and 26 and 27 Vic., cap. 90, I have the honour to transmit, in order that the same may be laid before Parliament, a General Abstract of the numbers of Marriages, Births, and Deaths registered in Ireland during the year 1882.

During the year 22,058 Marriages, 122,715 Births, and 88,737 Deaths were registered; in the same period (according to the returns obtained by the Royal Irish Constabulary and the Metropolitan Police, who acted as enumerators at the several Irish seaports), 89,136 persons emigrated. A decrease of 55,158 would thus appear to have taken place in the population. The estimated population in the middle of the year was 5,097,730.

The mean temperature at Dublin for the year was 48·9° against an average of 48·6° for the previous twelve years, and the rain-fall measured 31·184 inches, being 2·333 in. over the average for the years 1870–81.

**MARRIAGES.**—The number of Marriages registered in Ireland during the year 1882 was 22,058, being equal to a ratio of 1 in 231, or 4·33 per 1,000, of the estimated population in the middle of the year. Of this number, 15,248 were registered under the provisions of the Act 26 & 27 Vic., cap. 90, and 6,810 under the 7 & 8 Vic., cap. 81, being equal respectively to 1 Marriage in every 256 Roman Catholics, and 1 in every 176 Protestants. The average annual number of Marriages registered in the ten years 1872–81 was 24,303, or 4·58 per 1,000 of the mean population; the rate for the year 1881 was 4·24 per 1,000 persons.

**BIRTHS.**—The Births registered in Ireland during the year number only 122,715—63,108 boys and 59,607 girls—affording a ratio of 1 in every 41·5, or 24·1 per 1,000 of the population, against an average rate of 26·0 per 1,000 for the previous ten years.

**DEATHS.**—The number of Deaths registered was 88,737—43,906 males and 44,831 females—equal to a ratio of 1 in every 57·4, or 17·4 per 1,000 of the population, being 0·9 per 1,000 persons under the average rate for the ten years 1872–81, and 0·1 under the rate for 1881.

**Ages.**—Of the 88,737 Deaths registered during the year, 11,791 or 13·3 per cent., were of children under 1 year old, and 35,301, or 39·8 per cent. were of persons aged 60 years and upwards: the deaths of infants under one year old are equal to 96 per 1,000 births registered.

**Diseases.**—During the year, 7,485 Deaths were returned by the Registrars as having occurred from the principal zymotic diseases, being 8·4 per cent. of the total Deaths, and equal to 1·47 in every 1,000 persons living. The average annual number of Deaths from these diseases during the previous ten years was 11,013, or 2·09 in every 1,000 of the estimated average population, the lowest number during that period being 7,510 in the year 1881, and the highest 14,216 in 1872.

Of the 7,485 Deaths from these diseases last year, 127 (82 of which occurred in Belfast) were caused by small-pox, showing an increase of 55 as compared with the number in the year 1881, but being 569 under the average for the ten years 1872–81; 1,448 by measles, which in the preceding year caused only 402 deaths; 1,187 by scarlet fever, being 157 less than the number for the year 1881, 1,256 under the deaths in the previous year, and 1,035 under the average for the ten years 1872–81; 372 by diphtheria; 735 by whooping-cough, being 1,105 under the average for the ten years 1872–81, and 623 under the number for the year 1881; 2,069 by fever (895 typhus, 727 enteric or typhoid, and 447 simple continued and ill-defined fever), being 867 under the average for the ten years 1872–81; 1,529 by diarrhoea, being 275 under the average; and 18 by simple cholera.

**Inquests.**—There were 2,229 inquests reported to the Registrars, being 1 inquest to every 40 deaths registered.

**Deaths in Public Institutions.**—Of the 88,737 Deaths registered during the year, 13,651, or 15·4 per cent., occurred in public institutions.

Being closely connected with the subject of Vital Statistics, Tables relating to Emigration, Pauperism, the Weather, and the Prices of the principal articles of Food in 1882 and the previous ten years, are appended.

Incorporated with the Abstract of Marriages, Births, and Deaths are Vaccination Statistics for each Province, County, and Superintendent Registrar's District. I submit also a table (Table V.) showing the Births

and Deaths, and the Deaths from the principal Zymotic Diseases in the Urban Sanitary Districts of Ireland, and affording the means of comparison between the mortality in these districts and that in the rural portions of the country. The figures in this table and the details regarding vaccination are given on the authority of the Registrars, by whom the information for their respective districts was compiled from the original records.

As the general tabulation of the records of Marriages, Births, and Deaths for the year 1882 has not yet been completed, the particulars given in the Abstract, which are derived from the preliminary Quarterly Returns furnished by the Registrars, will probably be found to differ, in some instances, but not to any important extent, from the revised numbers in the Abstracts to be hereafter presented to Parliament with my detailed Report on the registration for the year.

I have the honour to be

Your Excellency's very faithful servant,

T. W. GRIMSHAW, M.A., M.D.  
*Registrar-General.*

GENERAL REGISTER OFFICE,  
CHARLEMONT HOUSE, DUBLIN,  
30th March, 1883.

TABLE I.—Showing for each of the years 1872–82, the *estimated* Population; the number of Marriages, Births, and Deaths registered, and the number of Emigrants enumerated, with the rates per 1,000 of the estimated Population represented thereby, and the averages for the ten years 1872–81.

## URBAN SANITARY DISTRICTS.

TABLE V.—BIRTHS AND DEATHS registered during the Year 1882, in the DUBLIN REGISTRATION DISTRICT, and in each of the PROVINCIAL URBAN SANITARY DISTRICTS in IRELAND (exclusive of Deaths in Public Institutions of Persons admitted from other localities), with the number of Deaths from each of the PRINCIPAL ZYMOVIC DISEASES.\*

NOTE.—\*The Dublin Registration District, which consists of the City of Dublin and its Suburban Districts, comprises the Urban Sanitary Districts of Dublin, Clontarf, Drumcondra, Clontarf and Glasnevin, Kilmainham, Rathmasnoe and Rongor, Peckbrook, Malinbeg, and Kingstown, and portions of the rural parts of the Poor Law Unions in which these Districts are situated. The details for it and for each of the other Urban Sanitary Districts marked thus (\*) in the following Table have been compiled from the Weekly Returns furnished by the Registrars and relate to the fifty-two weeks ending Saturday, 30th December, 1882.

## THE WEATHER.

The following particulars have been extracted from Meteorological Observations taken during the years 1870-82, at 40, Fitzwilliam-square, West, Dublin, by J. W. Moore, M.D., Univ. Dub., F.R.Q.C.P., F.M.S., Observer at Dublin for the Meteorological Office, London.

The mean Atmospheric Pressure has been obtained from daily readings of the barometer at 9 A.M. and 9 P.M., corrected and reduced to 32° Fahrenheit at the mean sea level. The Mean Temperature values have been deduced from the maximal and minimal readings of the thermometer in the shade by Kaentz's Formula, viz.,  $\text{min.} + \{\text{max.} - \text{min.} \times .41\} = \text{Mean Temperature}$ . The per-centage Amount of Cloud has been deduced from observations made three times daily—at 9 A.M., 3 P.M., and 9 P.M.—for the years 1870-1874 inclusive, and from observations made twice daily—at 9 A.M. and 9 P.M.—for the years 1875-1882 inclusive. The Rainfall is that measured daily at 9 A.M. A rainy day is one on which at least one-hundredth (.01) of an inch of rain falls within the twenty-four hours from 9 A.M. to 9 A.M.

The Mean Height of the Barometer during the year 1882 was 29.881 inches. The highest observed reading was 30.935 inches, at 10.30 P.M. on January 18th. The lowest observed reading was 29.716 inches, at 7.30 A.M., on March 1st. The extreme range of atmospheric pressure was, therefore, 2.217 inches.

The Mean Temperature of the year, deduced from the maximal and minimal readings of the thermometer in the shade by Kaentz's formula, was 48.9°. The highest reading was 71.4° on August 1st; the lowest reading was 13.3° on December 13th and 14th. The average mean temperature for the years 1870-81 calculated in the same way, was 48.6°. The mean temperature, deduced from the daily readings of the dry bulb thermometer at 9 A.M. and 9 P.M., was 49.4°.

Rain fell on 227 days, including snow or sleet on 12 days, and hail on 29 days. The average number of rainy days in the years 1870-81 was 197.7. The total rainfall measured 31.184 inches, compared with an average of 28.851 inches in the years 1870-81. Of this amount only 13.041 inches fell in the first six months of the year, on 111 days.

As regards the Direction of the Wind, 730 observations were made during the year, with this result—N., 36; N.E., 27; E., 55; S.E., 59; S., 80; S.W., 124; W., 225; N.W., 84; Calms, 40.

The year 1882 showed a mean temperature equal to the average; the rainfall and rainy days were considerably above the average both of the twelve years 1870-81 (28.851 inches on 197.7 days), and of the longer period of seventeen years, 1865-81 (28.194 inches on 193.5 days).

So fine and mild a January had not been experienced for many years. In Dublin there was a complete absence of frost, and the mean temperature was nearly 12° above that of January, 1881. On the 18th the barometer reached the phenomenal height of 30.935 inches. February was marked by singularly open weather, an absence of frost and snow, a high mean barometrical pressure (30.117 inches), and a preponderance of S. to W. winds. Very unsettled, stormy, open weather prevailed in March, the mean temperature being 3.1° in excess of the average. April was a cool, very changeable month, further characterized by a prevalence of polar winds (E. and N.W.), and a rainfall (3.526 inches) much in excess of the average. May was fine, with much bright sunshine, and a preponderance of easterly winds. The weather strangely resembled that of May 1881. June was a very changeable, showery, cold month, with strong westerly winds, a mean temperature 2° below the average, rainfall in excess, and as many as 25 rainy days. July was

changeable, cool, and breezy—the wind almost constantly from points between S.S.W. and W.N.W., and thunder occurring frequently; the rainfall was again in excess, and the rainy days (25) far exceeded the average. August was not unfavourable, although chiefly cool and breezy; beautiful weather prevailed until the 13th, when a thunderstorm ushered in a cool, windy, cloudy, and often showery period. September was a cold, changeable month; N.W. winds were unusually prevalent, and occasional heavy falls of rain occurred. The weather was very unsettled throughout October, but the mean temperature was about the average in Dublin, which city also remarkably escaped the torrential rains of the month in western Europe generally. November was cold, wet, and windy, being specially characterised by frequent displays of aurora borealis—that of the 17th was unusually brilliant, and accompanied with a memorable magnetic storm. December was a cold month, temperature showing great extremes, the range in Dublin being from  $13^{\circ}3'$  to  $56^{\circ}5'$ , or  $43^{\circ}2'$ ; a period of excessive cold began on the 5th and lasted until the 15th. Unusual warmth in the last week restored the balance of temperature to a great extent, so that the mean of the month ( $37^{\circ}7'$ ) fell less than  $3^{\circ}$  below the average. The mean temperature ( $46^{\circ}1'$ ) of the week ending the 30th was  $18^{\circ}9'$  above that ( $27^{\circ}2'$ ) of the week ending the 16th.

A general review of the year 1882 shows that the annual mean temperature was very slightly above the average ( $48^{\circ}9'$  compared with  $48^{\circ}6'$ ); the amount of cloud was as nearly as possible the average (60.7 per cent. compared with 60.8 per cent.); the rainfall was decidedly in excess (31.184 inches compared with 28.851 inches), and the rainy days were also much above the average, being 327 compared with 197.7.

TABLE showing the AVERAGE MONTHLY MEAN TEMPERATURE, AMOUNT OF CLOUD, RAINFALL in Inches, and NUMBER of RAINY DAYS for the Twelve Years 1870-1881 inclusive; and the Monthly MEAN TEMPERATURE, AMOUNT OF CLOUD, RAINFALL in Inches, and NUMBER of RAINY DAYS for the year 1882.

[For detailed Table for 1882, see page 24.]
